Randolph Building
401 Dulany Street
Alexandria VA 22314

Sir :

I, the undersigned, Kazuhiro ONO, a citizen of Japan, do solemnly declare as follows:

1. That I have executed a Declaration Under 37 C.F.R. 1.132 (hereinafter "First Declaration") on January 8, 2008 in connection with the above-referenced Application No. 10/535,336.
2. Upon review of that First Declaration, I note that the First Declaration refers to *Perilla frutescen* var. *crispa* when, in fact, the species "red shiso", i.e., *Perilla frutescens* var. *crispa flutescen purpurea*, should be referenced. Accordingly, this Supplemental Declaration includes corrected reference to "red shiso" (*perilla frutescens* var. *crispa flutescen purpurea*).
3. That experiments have been conducted under my direction to show reduction of weight of dental calculus using *Perilla frutescens* var. *crispa flutescen purpurea* polyphenols alone, glycolic acid alone, and a combination thereof, including Examples 3 and 18 in

International Application No. PCT/JP03/14709 of which the above-identified application is the U.S. national stage.

4. That the experiments were performed, as follows:

Example 3

Dental calculus in an amount of 0.6 mg obtained by washing dental calculus collected from the oral cavity and then wiping water with KIMWIPES was immersed in 1 ml of an aqueous solution of *Perilla frutescens* var. *crispa frutescen purpurea* polyphenols (produced by Meiji Seika Kaisha, Ltd., prepared as a 5% aqueous solution) for 105 minutes. After the treatment, the dental calculus was washed with water, wiped with KIMWIPES and weighed. The weight was 0.3 mg, and thus remarkable reduction of the weight of dental calculus was observed.

Example 18

Dental calculus in an amount of 0.9 mg obtained by washing dental calculus collected from the oral cavity and then wiping water with KIMWIPES was immersed in 1 ml of a 10% aqueous solution of glycolic acid for 9 minutes. After the treatment, the dental calculus was washed with water, wiped with KIMWIPES and weighed. The weight was 0.5 mg, and thus remarkable reduction of the weight of dental calculus was observed.

Example Using Combination Of Glycolic Acid And Polyphenols

Dental calculus in an amount of 1.2 mg obtained by washing dental calculus collected from the oral cavity and then wiping water with KIMWIPES was immersed in 1 ml of an aqueous solution containing glycolic acid (10%) and *Perilla frutescens* var. *crispa frutescen purpurea* polyphenols (produced by Meiji Seika Kaisha, Ltd. Prepared as a 5% aqueous solution) for 6 minutes. After the treatment, the dental calculus was washed with water, wiped with

KIMWIPES and weighed. The weight was 0.6 mg, and thus remarkable reduction of the weight of dental calculus was observed.

5. That in Example 3 wherein *Perilla frutescens* var. *crispa frutescen purpurea* polyphenol was used in the absence of inclusion of additional active ingredient, 50% eight of the dental calculus was dissolved after 105 minutes; that in Example 18 wherein glycolic acid was used in the absence of inclusion of additional active ingredient, 44% weight of the dental calculus was dissolved after 9 minutes; and that, in contrast, when polyphenol and glycolic acid are utilized in combination, there is obtained a more rapid dissolving of the dental calculus, i.e., 50% weight of the dental calculus was dissolved after 6 minutes.

6. The undersigned further declares that all statements made herein of his own knowledge are true and that all statements made on information and belief are believed to be true; and further, that those statements were made with knowledge that willful false statements and the like so made are punishable by fine or imprisonment or both, under Section 1001 of Title 18 of the United States Code, and that such willful false statements may jeopardize the validity of the above-captioned application or any patent issuing thereon.
